DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 24-37 in the reply filed on 2/5/2009 is acknowledged.
2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species A: an embodiment wherein the at least one precursor to be foamed and the component to be partially surrounded by foam or partially embedded in foam are made of the **same material**; and

Species B: an embodiment wherein the at least one precursor to be foamed and the component to be partially surrounded by foam or partially embedded in foam are made of **different materials**.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Currently, claim 24 is generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

In accordance with the guidance set forth in MPEP section 1850, it has been determined *a posteriori*, i.e., after taking the prior art into consideration, that the features common to all the claims, i.e., the features of independent generic claim 24, do not constitute "special technical features" since they do not make a "contribution" over the prior art in light of at least U.S. Pat. No. 2,917,384 to Grandey. Specifically note that Grandey teaches a method for making a foamed gas turbine component by mixing a metal powder with a foaming agent subjected to heating and cooling (see col. 1, lines 15-26 and paragraph bridging cols. 3 & 4).
